

Deployment Design Services

Plan the ideal Splunk deployment.

Do you want to get the most out of Splunk in a complex environment?

The Splunk experts on our professional services team are here to help. We have experience with all kinds of IT environments and users, and are well versed in how IT search is best deployed to meet availability, security, compliance and business intelligence objectives. We will perform a complete assessment and leave you with a detailed deployment design.

What we will do for you

- Inventory your target servers and devices
- Identify the IT data sources and data volumes for each class of server and device
- Interview target users to uncover what IT data sources they use and what dashboards, searches, reports and alerts they need
- Evaluate your data retention, availability, archiving, retirement and security policy requirements
- Assess your network topology to identify where data should be indexed, how data should be forwarded, and how to employ distributed search and management capabilities
- Create a deployment plan with the detailed results of our assessment and comprehensive deployment recommendations identifying where Splunk should be deployed, hardware and license volume requirements and configuration details for data inputs, indexing, data routing, distributed search, data management and custom reports, searches, alerts and dashboards.

Benefits

- Ensure your Splunk deployment follows best practices
- Minimize the time your IT staff spends deploying Splunk

Pricing

A la carte

Deployment design services are available a la carte at \$2,000 per day. Contact your Splunk sales representative to arrange for a scoping call today.

Prix-fixe

We also have a deployment design package available for a \$10,000 fixed price. This package includes:

- Inventory of IT data sources and volumes for up to 20 classes of servers and devices.
- User interviews of representatives of up to 10 user groups.
- Data retention, availability, archiving, retirement and security requirements analysis.
- Network topology assessment.
- Deployment design document.

Other Services

Following a deployment design engagement, you may also want to consider other services and education offerings to get your Splunk deployment started.

Installation, configuration and customization services

We can install and configure Splunk for you according to the deployment design.

Education

We offer classes on using, administering, deploying and developing with Splunk.

About Splunk

Splunk is software that indexes, manages and enables you to search logs and IT data from any application, server or network device in real time.
