

SPLUNK PROFESSIONAL SERVICES

The Architects of Resiliency

Start with a solid foundation

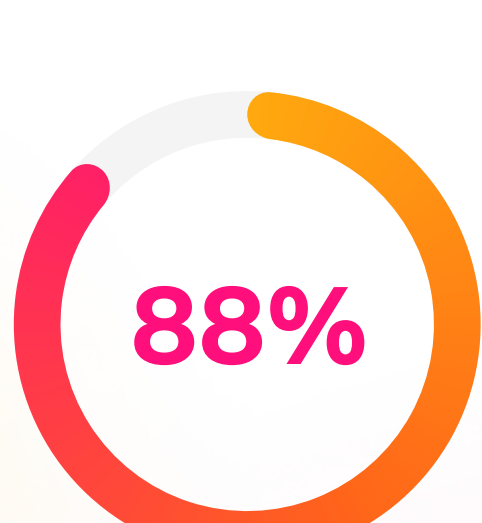

Your digital footprint is the bedrock that your company sits on. And if you can't see, respond to, and protect from threats to your network or IT operational issues, then that foundation could crumble.

Good news — you don't have to construct it on your own

Going alone is hard. Partner with Splunk's architects of resiliency and drive the right outcomes that empower your teams. We can help guide you with:

- Proactive engagements
- Deployment optimization
- New features
- Business-based outcomes
- Operational risk mitigation
- Use case identification and implementation
- Product and domain expertise
- Best practices for technical roadmaps and insights

of companies report difficulty finding the right talent and skill sets for IT and security operations

The blueprint to your success

Our experts — some of the leading minds in security and observability — can help guide your AI-powered digital resilience across your organization with:

- View a single dashboard of all alerts to help teams see, find, and fix problems faster.
- Reduce alert fatigue, along with grouping and enriching related alerts, helps teams reduce noise and quickly make sense of issues.
- Create alert prioritization with directed troubleshooting to help your teams efficiently respond to incidents.

The details make all the difference

When accelerating time to value, Splunk professional services know how to design the outcomes your business wants.

When resiliency is what you need, the architects of resiliency are who you call.
