

# Splunk AppDynamics SaaS Migration Service

## Transitioning from AppDynamics SaaS to Splunk Observability Cloud

Splunk Observability Cloud is an industry leading observability solution that delivers a single unified experience for IT application performance, infrastructure monitoring, digital experience monitoring, business insights, application security, and more. Making the transition from your AppDynamics SaaS environment to Observability Cloud provides visibility into every corner of your environment so you can resolve issues quickly and increase the digital resilience of your business.

Observe your cloud-native full IT stack: applications, infrastructure, domains, networks, Kubernetes

Instrument your IT stack with fully compliant and fully supported OpenTelemetry instrumentation

Use AI to manage your IT landscape including modern agentic applications

Build digital resilience with an industry leading unified observability solution

### Accelerate your transition with Splunk expertise

The AppDynamics SaaS Migration Service puts Splunk technical experts in the driver's seat to assist with the migration of your AppDynamics dashboards and configurations.

Our custom tooling enables us to quickly assess and migrate an existing AppDynamics environment, while our technical expertise and best practices help you successfully transition to gain the full benefits offered by the unified Splunk Observability Cloud.

Our technical experts provide a seamless transition of full-stack observability use cases from your AppDynamics SaaS to Observability Cloud including critical dashboards, health rules, and configurations. We migrate, validate, and operationalize your Observability Cloud and make sure that your teams are enabled and educated on the new platform, and ready to self-manage the environment and resolve issues faster.

Splunk Professional Services helps you accelerate a smooth transition from your standalone AppDynamics SaaS environment to a unified Observability Cloud experience managed by agentic AI capabilities with minimal business disruption, and all stakeholders engaged throughout the migration effort.

### Customer Benefits

- Accelerate a successful transition from AppDynamics SaaS to Observability Cloud
- Lower the total cost of ownership by transitioning to Observability Cloud
- Modernize your observability practices with support from Splunk Professional Services
- Preserve existing workflows while gaining new insights across hybrid and modern application frameworks

## What We'll Do and Deliver

This service includes an assessment, migration workshop, implementation and asset migration of your existing AppDynamics environment to the Observability Cloud. The services are delivered and validated by Splunk technical experts using Splunk best practices to accelerate the delivery of this solution.

### Offering at a Glance

#### Assessment

- Install and run the AppDynamics assessment discovery tool
- Generate an inventory of agents, applications, tiers, configurations, business transactions, integrations, dashboards, and health rules
- Map AppDynamics configurations with Observability Cloud capabilities

#### Migration Workshop

- Review the output of the assessment discovery tool and environment inventory
- Document what dashboards and configurations are required to be migrated
- Identify any gaps, challenges and pain points in current AppDynamics environment
- Identify what works well in AppDynamics
- Map desired outcomes to Observability Cloud
- Review additional requirements for migration to Observability Cloud

#### Implementation & Asset Migration

- Onboarding and adoption of the Observability Cloud solution
- Data collection and ingestion using the AppDynamics Combined Agent and OpenTelemetry Collector
- Implement integrations for administration of Observability Cloud
- Map business transactions and other configurations in Observability Cloud
- Identify and remove assets and configurations which are no longer required
- Migrate dashboards, health rules and configurations using the migration tool

#### Validation Checks

- Run validation checks throughout the migration process
- Track and compare migrated agents, data, and configurations against the original source

#### Operational Enablement

- Ongoing knowledge transfer on Splunk Observability Cloud implementation delivered throughout the migration process

## Resilience, let's build it together
