Splunk Enterprise Implementation Success

Professional Services

Best-in-Class Splunk Deployment

The Splunk Enterprise Implementation Success Offering provides new customers with the foundation to deliver performance and scale to their end users. Leveraging the latest best practices, our Splunk Accredited Consultants, Solutions Architects, and Project Managers will work with you to implement the best deployment of Splunk for your needs.

Benefits to Enable Enterprise Resilience

Splunk Enterprise Implementation Success engagements are designed to provide a jump start for your Splunk implementation to ensure your deployment is stable, ready to expand, and meets your current success criteria.

Getting Your Organization There

Discovery

Review and discuss requirements, critical or high priority use cases, and data sources with a Splunk Solutions Architect. They will build a customized implementation plan, including prerequisites, steps, and the optimal architecture for your deployment.

Implementation

Build and configure your Splunk instance/environment with a Splunk Accredited Consultant to the architecture agreed in the Implementation Plan. Based on the top priority use cases, locate, and bring the necessary data sources in to Splunk, then normalize them to ensure standardization of use case outcomes.

Outcome Development

Identify and develop top-priority use cases with your Splunk Accredited Consultant. Leverage Splunk dashboards, alerts, and apps – along with Splunk best practices – to achieve the outcomes agreed to in the Implementation Plan.

Evaluation of Success

Your Splunk Accredited Consultant and Project Manager will be able to provide ongoing updates throughout the engagement to measure success.

Expanding Success

With this successful Splunk deployment, your organization will be well equipped to expand data sources or use cases as needed.

At a Glance

The Splunk Enterprise Implementation Success offerings are designed for customers looking to build a production-ready Splunk environment to accelerate time-to-value tied to critical enterprise-level goals.

Three sizes to meet your needs

Whether it's strategic guidance or the need for more hands-on expertise and execution, we have flexible options that will help you along your Splunk journey.

Base

Customers with dedicated, in-house Splunk resources with the ability to self-implement and need deployment best practices, guidance, and knowledge transfer/enablement.

Standard

Customers that require hands-on deployment help to rollout their first use case.

Premium

Customers that are fully invested in Splunk at the enterprise level, focused on identifying new opportunities for solution optimization and/or use case expansion and need staff augmentation to deploy additional use cases.

Guidance at Every Step of Your Splunk Journey

Splunk has developed a wide range of Service offerings to be responsive to dynamic challenges, requirements, and urgent needs. As your organization is focused on achieving accelerated time-to-value, as well as the need to optimize workflows, you may need help to maximize your use of Splunk in driving enterprise resilience for better outcomes.
