Splunk app for PCI Compliance	5D002	ENC Unrestricted 740.17(b)(1)
Splunk App for Microsoft Exchange	5D002	ENC Unrestricted 740.17(b)(1)

Frequently Asked Questions

Are Splunk products subject to US Export Controls?

Yes, all Splunk products are subject to US export and re-export controls. More specifically, Splunk products, including software, services, and technology are subject to export controls administered by the United States, including, but not limited to, the U.S. Department of Commerce Export Administration Regulations ("EAR").

What is ECCN number?

Export Control Classification Numbers (ECCNs) are five-character alpha-numeric designations used on the Commerce Control List (CCL) to identify dual-use items for export control purposes. An ECCN categorizes items based on the nature of the product, i.e. type of commodity, software, or technology and its respective technical parameters.

What is CCATS number?

Commodity Classification Automated Tracking System (CCATS) is an alphanumeric code assigned by the United States Bureau of Industry and Security (BIS) to products that it has classified under the Export Administration Regulations (EAR). This number can be furnished upon request on a product-by-product basis.

What are the products' respective Encryption Registration Numbers (ERN)?

An Encryption Registration Number (ERN) is issued when BIS registers information about an exporter of certain encryption items authorized to be exported under License Exception ENC or as "mass market" items. However, as of September 20, 2016, ERNs are no longer required for use of License Exception ENC. Splunk can provide the ERN on request for a product that Splunk is not relying on License Exception ENC.
