

Splunk Cloud Migration Assessment Offering

The Splunk Cloud Migration Assessment Offering

evaluates and determines your on-premise Splunk installation for Migration to Splunk Cloud. Our analysis results in the development of a roadmap that provides guidance, best practices and milestones for migrating to Splunk Cloud.

Organizations need a pragmatic approach to help migrate their environment to Splunk so they can minimize downtime while also maximizing their architecture to take full advantage of Splunk Cloud.

The Splunk Cloud Migration Assessment Offering identifies current configuration and performance pain points. Our experts lead a collaborative engagement to enable organizations to thoroughly plan a remediation of inefficient configurations, while designing the migration path to Splunk Cloud. By following a prescriptive approach with defined milestones, you can move forward with your Cloud Migration with confidence.

Assessment Benefits

After the three-day assessment, you will:

- Understand the complete process of migrating to Splunk Cloud
- Determine not only the technical aspects of your migration but also the understand the operational changes and end user experiences
- Understand and refine your key configurations to be able to remediate for best practices prior to your migration

You'll Also Receive

- **An architecture diagram** detailing the current state of your current Splunk architecture and the proposed future state in Splunk Cloud
- **Potential Pitfalls Clearly Identified** to provide plenty of time to build any required remediation plans
- **A multi-phase Migration Plan** to help you migrate at your pace with an emphasis on milestones and targeted value

Is This Assessment for You?

The Splunk Cloud Migration Assessment Offering is designed for Splunk customers who have already deployed a functional Splunk infrastructure running. Additionally, this assessment is targeted to customers who:

- Want to implement a Splunk deployment to best practices
- Have already on-boarded data and custom-built applications

Why Use Splunk Professional Services?

We are here to help customers to get the most out of their Splunk deployments. Our services are backed by Splunk experts, who provide consistent and quality service delivery, architecture guidance, training and ongoing support. Splunk Professional Services only exists to get customers to valuable outcomes with their machine data – faster than they could on their own. Additionally, we will help you:

- **Identify** where your Splunk Enterprise can be optimized to best practices
- **Prioritize** your migration path to Splunk Cloud
- **Learn** and understand best practices and recommendations for getting the most out of your Splunk Cloud deployment
- **Innovate faster** and leverage Splunk experts to accomplish more in less time
- **Gain quicker time to value:** ensure the most expedient and efficient method to use Splunk Cloud
