Splunk Education Learning Path for SignalFx Customers

Splunk Education programs help you get the most out of Splunk. The curriculum is comprised of lecture, demos, hands-on lab exercises and assessments to test your knowledge. Courses are concise and designed for Splunk users, administrators, developers, architects and partners and are structured for rapid learning. We offer a variety of delivery methods including instructor-led virtual and onsite training as well as self-paced training that provides flexibility to attend at anytime from anywhere. Whether you just downloaded Splunk or have been using it for years, Splunk Education courses deliver value and accelerate success.

SignalFX Customers

Splunk Education's learning path for SignalFx includes individual courses that teach you core skills for infrastructure and microservices monitoring, practical applications of using the SignalFx User Interface and API best practices. Each course has been designed to help users at different levels become proficient at working with the SignalFx solution.

SignalFx Fundamentals Series (eLearning)

This series of training modules targets Ops, SREs and observability teams. It provides practical applcations of using the SignalFx platform. Learn to navigate the user interface and monitor your infrastructure using out-of-the-box SignalFx functionality.

Infrastructure Monitoring Using SignalFx

This comprehensive course targets Ops, SREs and observability teams. It provides practical applcations of using the SignalFx platform. Learn to navigate the user interface and monitor your infrastructure using out-of-the-box SignalFx functionality.

Automation Using the SignalFx API

This course provides the foundation for you to use the API to automate bulk actions such as the creation of charts, dashboards, and alerts. See how to programmatically perform computations that can be used in charts and detectors or streamed in real-time. Use the API to manage teams in SignalFx.

Sending Custom Metrics to SignalFx

This course, targeted towards developers and DevOps, focuses on creating custom metrics to monitor your applications/services with SignalFx. Learn to instrument applications/services to send in custom metrics that characterize the application of service. Define relevant metadata for your metrics to let you find, filter and aggregate the metrics that you want ot chart or alert on. Create charts and custom dashboards to visualize these custom metrics. Create detectors to monitor the metrics to alert when there are any issues with the application or service.
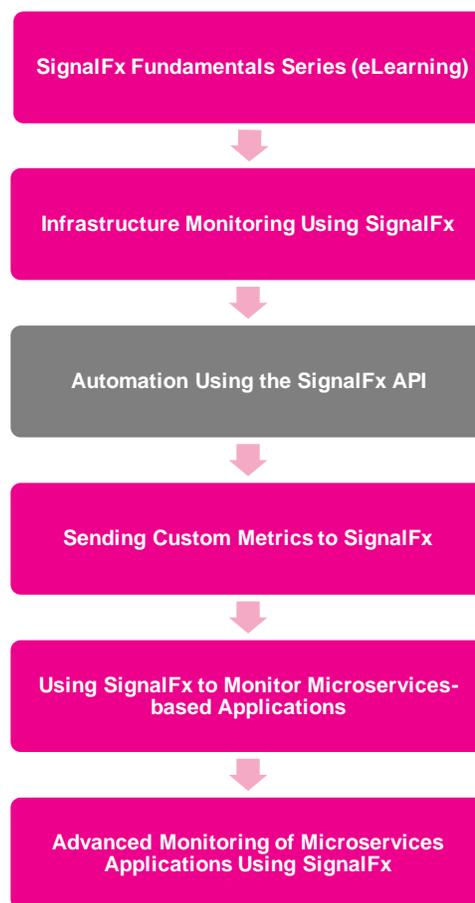

Using SignalFx to Monitor Microservices-based Applications

This course targeted to developers and DevOps enables you to use the SignalFx Microservices APM component of SignalFx to analyze traces, troubleshoot and monitor your microservices-based applications. Through in-person discussions and hands-on activities, deep dive into uses of distributed tracing, analyze traces in SignalFx and use SignalFx dashboards.

Advanced Monitoring of Microservices Applications Using SignalFx

This course targeted to developers and DevOps enables you to use the SignalFx Microservices APM component of SignalFx to analyze traces, troubleshoot and monitor your microservcies-based applications. Through in-person discussions and hands-on activities, learn to deploy SignalFx Microservices APM and instrument applications to send in traces to SignalFx. All activities include Python and Java examples.
